Concerning the claims 1, 4:

The document 1 describes a phosphorescent pigment, a compound expressed as MA12O4: M is constituted by a compound comprised of one or more metal element selected out of a group of Ca, Sr, Ba as a base crystal while adding Eu as an activator and at least one or more element out of a group comprised of Bismuth and so forth in 0.01 to 10 mole% as a coactivator to the metal element expressed as M. Tables 7 and 13 indicate alkaline earth metal aluminate phosphor whose activator is divalent europium, which contains Bi.

The document 2 discloses a phosphorescent pigment which is constituted by a base material expressed as MA14O7 while adding Eu as an activator and either Nb, Mo, Ta, W, Bi, etc. in equal to or more than 0.0001 to equal to or less than 20 mole% as a coactivator to the M, and describes Nb or Dy as favorable coactivator (paragraph 0005).

Therefore, the documents 1 to 2 describe alkaline earth metal aluminate phosphor whose activator is divalent europium, which contains Bi or Nb.

Accordingly, the subject matters of claims 1, 4 do not appear to be novel in view of documents 1 to 6.

The documents 3 to 6 describe the addition of Nb, In, W, Bi, etc. to the alkaline earth metal aluminate phosphor whose activator is divalent europium.

A person skilled in the art can easily arrive at an attempt to improve various physical properties by adding Nb, In, W, Bi, etc. to the alkaline earth metal aluminate phosphor whose activator is divalent europium, according to the description of the documents 3 to 6.

Accordingly, the subject matters of claims 1, 4 do not appear to involve an inventive step in view of documents 3 to 6.

Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability:
citations and explanations supporting such statement

Concerning the claims 2, 3, 5 to 13:

The Documents cited in the ISR do not describe the production by firing the alkaline earth metal aluminate phosphor whose activator is divalent europium, to which Nb, In, W, Bi, etc. is added, under the reduction atmosphere before firing under the oxidation atmosphere, or the addition of Nb, In, W, Bi, etc. to a phosphor having a component of $(Ba_{1-x}Sr_x)_{1-y}Eu_yMgAl_{10}O_{17}$, and it is also considered to be non-obvious for a person skilled in the art.

Accordingly, the subject matters of claims 2, 3, 5 to 13 appear to be novel, to involve an inventive step.
